KEROPLAST

PERFILES DE POLIETILENO DE ULTRA PESO MOLECULAR

(UHMW-PE)

KEROPLAST

Es una empresa dedicada a la fabricación de perfiles de Polietileno de Ultra Alto Peso Molecular (UHMW-PE). Además del maquinado de piezas especiales en todos los plásticos al servicio de las siguientes industrias:

-Embotelladora -Alimenticia -Textil -Química -Cementera -Maquiladora
-Artes Gráficas - Farmacéutica

Siendo una empresa joven nos hemos colocado como una empresa confiable ofreciendo servicios de excelente rentabilidad para cada uno de nuestros clientes.

En su deseo constante de mejoría y principalmente de optimización de recursos, KEROPLAST cuenta con una capacidad de manufactura de alta tecnología para la fabricación de sus productos, además de contar con mano de obra especializada

Por ser fabricantes podemos ofrecerle ventajas competitivas en beneficio de su empresa: precios bajos, altos estándares de calidad y una notable reducción en los tiempos de entrega.

¿Por qué usar guías fabricadas en UHMW-PE?

- Garantiza una mayor duración de las cadenas y las correas. · Mayor duración de las guías. · Sustitución e instalación simplificadas. · Precisa mecanización. · Perfiles especiales.
- Mayor duración de cadenas y correas: las guías de UHMW-PE son más deslizantes que el acero u otros termoplásticos, lo cual disminuye el desgaste de las caras correas de transmisión y cadenas de unión/accionamiento.
- Reducido desgaste: las guías superan la resistencia a la abrasión del acero en una proporción 3 a 1 y la del ptfe en una proporción 5 a 1. UHMW-PE posee la máxima resistencia a la abrasión de cualquier termoplástico para conseguir una mayor duración de las guías, incluso en entornos abrasivos.
- Perfiles especiales: keroplast le ofrece casi cualquier perfil de guía en UHMW-PE especial que necesite. Nuestros especialistas de aplicaciones le ayudarán a diseñar la mejor guía para su aplicación y le ofrecerán un presupuesto, en menos de 48 horas. Sólo tiene que enviarnos su gráfico o pieza de muestra para realizar el presupuesto
- Propiedades especiales del UHMW-PE Superficie de baja fricción su bajo coeficiente de fricción se acerca al del ptfe, su superficie limpia y auto lubricada permite que partes móviles como bandas y cadenas se muevan fácilmente y sin desgaste prematuro o teniendo que agregar tensión excesiva sobre componentes de mucho valor. Las superficies recubiertas de UHMW-PE permiten el deslizamiento suave y libre de materiales en polvo o cohesivos. También evita que se maltraten o rayen objetos como las botellas y otros empaques. Se instala mecánicamente, ya que no hay adhesivos que se le peguen.

PROPIEDADES

Resistencia al desgaste

La estructura molecular de UHMW-PE lo hace inherentemente superior en resistencia al desgaste por fricción. Su coeficiente es superior al polietileno de alta densidad, nylon y acetal. Los recubrimientos de UHMW-PE protegen estructuras de mucho valor contra el desgaste prematuro.

Resistencia al impacto

Es el mejor sustituto de muchos materiales que están en contacto con sacudidas repentinas, golpes fuertes, frecuentes o constantes. Los materiales tradicionales se agrietan, se astillan o simplemente presentan fatiga. El UHMW-PE es el único plástico que entre más se golpee, se hace más duro.

Resistencia a la corrosión

Resiste los ataques químicos severos y no absorbe humedad. Es excelente para ser aplicado en ambientes cáusticos, agua salada, limpiezas a vapor. Mantiene la maquinaria en movimiento sin bloqueos causados por bordes de metales corroídos.

Nula absorción de agua

Al igual que otros polietilenos es hidrófugo, esto es no absorbe agua, ni se hincha al contacto con medios húmedos, por lo que sus propiedades y dimensiones permanecen constantes.

Resistencia a la abrasión

La resistencia a la abrasión lo hace útil al mejorar considerablemente la vida de los elementos cuyas aplicaciones son de rendimiento crítico, tales como ruedas, engranes, bujes, chumaceras, y otras partes de equipos en movimiento.

PROPIEDADES

Resistencia térmica

La estabilidad térmica del UHMW-PE es más elevada que la de muchos otros plásticos, ya que sometiéndolo a ciertas exigencias mecánicas, este puede trabajar en un rango de -230° c a 85° c sin que se produzcan deformaciones importantes.

Resistencia a la fatiga

La fatiga de los materiales, muy común en los metales sujetos a grandes esfuerzos, ha sido notoriamente reducida mediante partes fabricadas de UHMW-PE. Mayor rendimiento de las partes representa un costo más bajo de mantenimiento y mejor eficiencia de operación. Contacto con los alimentos

El UHMW-PE es fisiológicamente inerte o no tóxico, cumple con las regulaciones de la FDA/USDA, para usarse en proceso de productos alimenticios y farmacéuticos. No genera bacterias, no guarda olores ni sabores y además es fácil de limpiar.

Otras características · Fácil de maquinar, por lo que se reducen los tiempos muertos por reposición de partes de equipo al ser fabricadas en este material. Se trabaja tan fácil como la madera. · Por sus características de absorber impacto se consigue tener una maquinaria más silenciosa mejorando así el ambiente de trabajo. · Dialéctico. Es ideal para piezas que van en equipos eléctricos o electromecánicos. · Seguro, al no generar chispas, es segura su aplicación en ambientes inflamables, explosivos o altamente combustibles. Además de ser auto extingible.

PROPIEDADES

Combata la fricción y reduzca costos gracias a las guías para cadena de polietileno de ultra alto peso molecular (UHMW-PE).

Incrementa la duración y conservación de las cadenas de rodillos, de platillos y correas .

Keroplast le ofrece un amplio catálogo de perfiles para usarlos como guías de correas, y de cadenas en aplicaciones industriales. Los perfiles de UHMW-PE tiene como cualidad la máxima resistencia a impactos y a la abrasión prácticamente de cualquier plástico disponible en la actualidad. Además de tener un reducido coeficiente de fricción y una superficie con auto lubricación, antiadherente, tenemos un polímero de ilimitadas aplicaciones industriales. Algunas aplicaciones de nuestros perfiles son:

- Perfiles guía para cadenas transportadoras.
- Perfil clip para recubrimientos de guías de aluminio y metal.
- Sufrideras para cadenas de tablillas.
- Perfil guía doble y triple para cadena transportadora.
- Perfil clip para campana retenedora.
- Guías de desgaste.
- Perfiles deslizadores.
- Perfiles para forro de solera.
- Perfil guía transportador aéreo.

Además fabricamos refacciones plásticas para la industria en UHMW-PE y en otros materiales plásticos:

- Estrellas alimentadoras.
- Rodillos guiadores.
- Coronas dentadas.
- Bujes.
- Platos de filtración.
- Engranajes.
- Mangos para herramientas.
- Poleas.
- Sprockets.
- Catarinas.
- Copas centradoras.
- Tapones de protección
